ABOUT ME

Computer Science Engineering student specializing in Full-Stack Web Development (MERN stack) with hands-on experience building secure, real-time web applications and AI-powered systems. Developed and deployed 5+ projects, including an AI-based resume screening system using NLP techniques. Strong foundation in RESTful APIs, authentication systems, database design, and collaborative development through internships and hackathons.

TECHNICAL SKILLS

- **Programming Languages:** Java, C++, C, JavaScript, Python
- **Frontend :** HTML, CSS, React.js
- **Backend :** Node.js, Express.js
- **Databases:** MongoDB, PostgreSQL
- **Web Concepts:** REST APIs, Authentication & Authorization, CRUD Operations, HTTP, JSON
- **Tools:** Git, GitHub, Postman, VS Code, Vercel

PROJECTS

- **Adaptive Semi-Structured Dataset Reconstruction Engine**
 - Developed an automated data preprocessing pipeline that eliminates manual cleaning overhead by delivering dual-intent outputs optimized for BI analytics and ML training workflows.
 - Engineered 4 heuristic-based recovery strategies (Segmented, Positional, Streaming, Hybrid) using row-signature analysis to instantly reconstruct broken, shifted, or OCR-corrupted datasets into flat tabular schemas.
 - Integrated automated distribution tracking that handles missing data by dynamically switching to robust median imputation for highly skewed features (Skewness > 0.5) to eliminate outlier bias.
 - Implemented high-cardinality noise filtering and a Pearson Correlation matrix ($r > 0.85$) to automatically isolate and drop redundant multi-collinear features based on their mathematical predictive strength.
 - Built a custom-styled Streamlit interface utilizing an in-memory session cache guard (st.session_state) for lag-free toggling between raw BI dashboards and encoded ML training matrices.
Technologies: Python, Pandas, NumPy, Regex, OOP, Data Reconstruction & Processing Algorithms, Machine Learning, Streamlit
- **Virtual Voting System (Full-Stack Web Application)**
 - Developed a secure web-based voting platform with Voter, Candidate, and Admin roles
 - Implemented real-time voting updates using Socket.io
 - Built an admin dashboard to manage elections, candidates, and monitor real-time voting analytics
 - Implemented JWT-based authentication and role-based authorization for secure access
 - Integrated frontend and backend for complete end-to-end functionality
 - Deployed project: <https://virtual-voting.vercel.app/>
 - GitHub: <https://github.com/Shyam1826/virtual-voting.git>
Technologies: React.js, Node.js, Express.js, MongoDB, Socket.io, Git
- **AI Resume Screening and Candidate Ranking System**
 - Built an AI-based resume analysis system that ranks candidates against job descriptions
 - Implemented TF-IDF and cosine similarity, reducing manual screening time by ~50%
 - Developed an interactive recruiter dashboard using Streamlit for resume evaluation
 - Parsed PDF resumes using Python libraries for automated data extraction
Technologies: Python, NLP, Streamlit, TF-IDF

EXPERIENCE

• INTERNSHIP EXPERIENCE

AI: Transformative Learning Internship – TechSaksham (AICTE, Microsoft & SAP) Edunet Foundation | Feb 2025 – Mar 2025

- Developed AI-based applications through project-based learning
- Implemented NLP techniques for resume screening and similarity matching
- Collaborated with mentors and peers to deliver functional prototypes
- Gained exposure to industry-level AI tools and workflows

• HACKATHON EXPERIENCE

RideOn – Smart Companion App for Bikers: 24-Hour Hackathon | Sreyas Institute of Technology | Apr 2025

- Built a web app featuring a virtual bike garage, maintenance log, and fuel log with ML-based mileage prediction.
- Used Supabase for backend and user auth, deployed via Vercel.
- Implemented machine learning-based mileage prediction using Linear Regression
- **Technologies:** React.js, Supabase, Vercel, JavaScript, ML (Linear Regression)
Live Demo: <https://lnkd.in/gtgPxUOD>

EDUCATION

- **B.Tech in Computer Science Engineering**
Jawaharlal Nehru Technological University Hyderabad (JNTUH)
CGPA: 7.95 | 2023 – Present
- **Intermediate (MPC):** Narayana Junior College – 91.5% (2021–2023)
- **High School:** Dr. KKR's Gowtham International School – 86.4% (2017–2021)

CERTIFICATIONS

- **The Complete Web Development Bootcamp – Udemy**
(HTML, CSS, JavaScript, React.js, Node.js, Express.js, MongoDB)

ACHIEVEMENTS

- Secured Top 29 position out of 1500 teams in Bajaj Finserv HackRx 6.0, showcasing expertise in innovative problem-solving and technical implementation.
- Built and deployed multiple full-stack and AI-based projects

LANGUAGES

- Tamil: Native
- English: Proficient
- Telugu: Fluent
- Hindi: Fluent
